MAINTENANCE

Our wrapped doors are a durable and easy to clean product, however there are some limitations on their use in certain applications.

It is our recommendation that all end users are made aware that if **high temperatures** or **excessive water** are present this may cause the edges to peel back, which can result in failure of the product.

Areas for particular caution:

- If doors are fitted adjacent to ovens, always ensure that they are shielded from heat using heat deflectors. Doors must not be fitted any less than 750mm above a hob. Contact your supplier if you require more information.
- Never use appliances that generate heat, such as a toaster, directly underneath our doors.
- Never allow concentrated steam (e.g. from a kettle) to be released directly underneath a PVC edged or vinyl wrapped door.
- Never allow a PVC edged or vinyl wrapped door to become saturated with water.
- For cleaning use a damp cloth and a non-abrasive domestic cleaner, do **NOT** use bleach.

With the correct care your doors will give you many years of trouble free service.

This customer care information does not affect your statutory rights.
